Tech Export Services Corridor (TESC) is an export support organization for Iranian high-tech and medium-tech companies. TESC facilitates the export process for Iranian manufacturers by providing services in the areas of marketing, consultancy, and international alliances. TESC chooses producers providing the highest quality products based on Export Readiness Assessment (ERA) basis and supports competent manufacturers for export. Therefore, TESC is capable of certifying the quality of products and reliability of Iranian producers in high-tech fields and creating a trustful environment for collaboration between Iranian and foreign companies.

NOVATIS TEB COMPANY

Having been established in 2013, Novatis Teb Company was assigned the duty of production and supply of dialysis wards' equipment and machinery by the ICD Group in order for attaining national self-sufficiency and completing the entire dialysis treatment chain. In addition to upgrading the knowledge and technology in the field of dialysis, Novatis Company has managed to localize the technology for the production of dialysis machinery and equipment making use of adept and proficient engineers in the fields of medical equipment, mechanical and hydraulic engineering, electrical engineering, electronics, and automation. The company was honored to receive the "knowledge-based company" certificate by Presidential Deputy for Science and Technology in 2015. Company managed to produce an RO machine in compliance with international ANSI/AAMI RD 62, ISO 13485, IEC 60601, 93/42/EEC standard regulations and competitive to European brands. A large number of ICD Group's production line machinery have been designed and produced by Novatis Teb Company including the machinery for the line of dialyzer production, blood bag production lines, and other dialysis requirements.

Parseh Intelligent Surgical Systems (PARSISS)

started working on the design and implementation of an image guided surgery systems in 2007. The recent image-guided surgical navigation systems enhance surgeon's ability to navigate instruments and target specific anatomical structures. This system tracks the location of surgical tools and indicates their positions on patient-specific images which are reconstructed from pre-operative images.

Parsiss offers a fully customizable platform technology to develop advanced image guided systems for different applications such as neurosurgery (OpticVision™), ENT (Image Vision™), Dental Implant (DentoGuide™), guided Transcranial magnetic stimulation (MagnoGuide™) that are CE marked.

These systems use alternative precise tracking technologies including stereo vision and electromagnetic trackers, and sophisticated GPU-based visualization techniques.

This system has greatly enabled the surgeon to confidently perform the surgery more quickly in particular complicated surgical procedures. The main impact of using this system for patients includes fewer complications, shorter hospitalizations, faster recoveries and reduced treatment costs.

We at Parsiss have increasingly focused on minimizing the invasiveness of surgical procedures by the state-of-the-art solutions.
